

## MI PRIMERA APP WEB EN HEROKU

1. Accedemos a [www.heroku.com](https://www.heroku.com)
2. Creamos una cuenta y accedemos a ella.
3. Creamos nuestro primer Dyno.
  - Le damos a “Create new app”.
  - Seleccionamos la región y le ponemos un nombre.
  - Creamos un repositorio en GitHub.
  - Conectamos el repositorio dentro de Heroku.
  - Dentro de Activity > Connect to GitHub.

 If you use GitHub, you can link your deploys to the code diff on GitHub. [Hide](#) [Connect to GitHub](#)

### Connect to GitHub

Connect this app to GitHub to enable code diffs and deploys.

### View your code diffs on GitHub

Connect your app to a GitHub repository to see commit diffs in the activity log.

### Deploy changes with GitHub

Connecting to a repository will allow you to deploy a branch to your app.

### Automatic deploys from GitHub

Select a branch to deploy automatically whenever it is pushed to.

### Create review apps in pipelines

Pipelines connected to GitHub can enable **review apps**, and create apps for new pull requests. [Learn more.](#)

[Connect to GitHub](#)

- Añadimos un index.php a nuestro repositorio.

- Buscamos el repositorio y lo seleccionamos.

### Connect to GitHub

Connect this app to GitHub to enable code diffs and deploys.

Connect

- Habilitamos las implementaciones automáticas.

### Automatic deploys

Enables a chosen branch to be automatically deployed to this app.

 You can now change your main deploy branch from "master" to "main" for both manual and automatic deploys, please follow the instructions [here](#).

Enable automatic deploys from GitHub

Every push to the branch you specify here will deploy a new version of this app. **Deploys happen automatically:** be sure that this branch is always in a deployable state and any tests have passed before you push. [Learn more](#).

Choose a branch to deploy

master

☐ Wait for CI to pass before deploy

Only enable this option if you have a Continuous Integration service configured on your repo.

Enable Automatic Deploys

- Implementamos la rama de GitHub.

### Despliegue manual

Implemente el estado actual de una rama en esta aplicación.

Implementar una rama de GitHub

Esto implementará el estado actual de la rama que especifique a continuación. [Obtenga más información](#).
